

WAHYU LAKE CITY

Kuala Lumpur, Malaysia

WAHYU LAKE CITY, Kuala Lumpur, Malaysia

JRDV Urban International has planned a world class urban district that rivals anything in Singapore or Malaysia. The Promenade at Wahyu Lake will create a world-class walkable waterfront urban district. The plan integrates working-living-leisure & private-public-civic into a single connected great place destination. Lake City is part of a lake restoration project that will use the proceeds from the development to restore the flora and fauna of the lake and eliminate the pollution caused by years of neglect and illegal dumping. This project will turn Wahyu Lake into a community asset for generations to come.

The design draws from the International and Malaysian urban traditions of street, park, plaza, arcade and neighborhood. The promenade is designed to become the central heart of the community and the larger region. The design maximizes connectivity with regional transportation, 100% walkable connectivity, live-work-play functional inter-connectivity, connection to nature, as well as culture and a creative community.

The Plan creates a framework for achieving high performance sustainability and interoperability becoming a zero-carbon urban district. Smart City Technologies will enable the Eco-District to use technology, data and analytics to improve infrastructure and enhance services. Lake City will be the showcase city for the future of new urban development.

Project by E. McFarlan as Principal & Director at JRDV Urban International
