

MARINA PARKCITY MASTER PLAN, Miri, Sarawak Malaysia

JRDV Urban International has planned an innovative mixed-use master plan for a 40-acre town center. The Miri CityCenter master plan is the first comprehensively designed environmentally sustainable City in East Malaysia. The Master Plan creates a strategically branded urban place based on regional urban typologies, including authentic streets, plazas, parks, and urban building typologies. It also establishes four key development districts – Waterfront District, Market District, City Front District, and River Park District. The new urban downtown carefully blends traditional and contemporary design elements.

The plan establishes a strong urban connection to the ocean waterfront that historic Miri never was able to realize, by creating an active Waterfront retail district that will become a regional destination for Malaysia.
